

AMENDMENTS TO THE SPECIFICATION

Please insert the following before the paragraph beginning at line 20 of page 2 of the specification:

Brief Description of the Drawing

Figure 1 illustrates the viscosity rise as a function of storage time for (i) a coating composition according to the present invention (coating composition 4A), which comprises a polysiloxane, a catalyst, and an acrylic polymer, which is substantially free of functional groups that can react with the polysiloxane or with the catalyst in the coating composition, and (ii) a comparative coating composition (coating composition 4B), which comprises a polysiloxane, a catalyst, an alkoxy-silyl-functional acrylic polymer, and no acrylic polymer, which is substantially free of functional groups that can react with the polysiloxane or with the catalyst in the coating composition.
